The cancer-related proteins, alpha(1)-microglobulin and albumin have recently been shown to be overexpressed in prostate cancer tissues. Delta 2-Tocopherol Transfer Protein (TTPD) is a novel serum albumin isoform that binds retinol, tocopherol, and other lipid-soluble molecules. We studied TTPD expression in prostate tissues using immunohistochemistry and

Northern blot analysis. Normal prostate epithelial and stromal cells, and malignant prostate epithelial cells were negative for TTPD expression by immunohistochemical analysis. However, TTPD was found in moderately differentiated prostatic carcinoma epithelial cells that were negative for PSA and PSMA and were probably not hormone-dependent. TTPD expression was also
