Monitor, network, audio, temperature and fan controls: all with a single Windows app. Like it MSI Center Official Highlights One of the important features you'll find under the Usage tab is the Smart Priority, which allows you to make your computer focus on what's most crucial to you. If you're playing League of Legends, you can set your League minimap to render on the dual-screen overlay, which would in turn draw your attention to the important areas of the screen you need to check for incoming games or objectives. Another feature to help your gaming experience would be the option to have your microphone and keyboard muted in games, such as the anti-ghosting feature of MSI Gaming Center, which has a dedicated speaker with intuitive volume control. It's perfect for when you have the screen turned on, but don't want distractions while you're going for a quick nap. When it's time to check what's happening with the outside world, there's the Audio tab, which is divided into three parts— Input, Speakers, and Fans— but you can access any of these individual sections by simply clicking on the respective tab. As for the inputs, users can adjust their volume from Front, Rear and Headphones, as well as monitor PC fans as well as the on and off status of their Wi-Fi and Bluetooth. It's also possible to see where the power is going, and moreover, monitor what's happening on the screen by setting your monitor up to a specific Temperature. If you've seen the Smart Control app on your smartphone or tablet, you can basically do this in MSI Center by simply clicking on the icon on the keyboard and hovering over the icon of the temperature setting. All you need to do is tap it and your keyboard will get hotter or cooler to you. Similarly, you can set any of the fans in your system to be your focus by clicking on the icon and when you hover over it, you can set your CPU, GPU, and even the CPU fan. Lastly, there's the usage tab, which contains a wide array of features. From the Usage tab, you can sort your disks into the categories of Devices, Drives, and Hard Disks and you can further filter these categories by their Capacity, Type, and Health.
