ArcBall is an arcade arcanoid-like game. You can move a ball around on the level - your only goal is to destroy all target blocks. You can destroy blocks by hitting them with the ball. There are three types of blocks on the level: red, blue and white ones. The first one is called "core" and we call "bricks" those on which ball bounces when it hits. Blocks are destructible blocks. Red and blue blocks can only be destroyed by hitting the ball on them. White blocks are stronger than bricks and can only be destroyed by hitting the ball directly. When all blocks on the level are destroyed (with bricks and core blocks) all bricks collapse forming an exit block which is your final score. There are 3 types of bricks on the level: ~ Small bricks that can be destroyed by hitting the ball, they can be destroyed only if you hit them by the ball. ~ Big bricks that are not destructible, they could be destroyed by hitting the ball but they won't be created. ~ Exit bricks that form the exit block when all bricks on the level are destroyed (with bricks and core blocks). When all bricks on the level are destructible they can form the exit brick. (Bricks are destructible blocks) There are 5 levels in the game and you can play for up to 3 minutes per level. Features: ~ 20 levels ~ 20 bricks and 10 core blocks ~ 2 powerups (red and blue shots) ~ Damage powerup (damage the ball and make it bounce) ~ Game statistics: score, time per level, game length (3 minutes) If you have any suggestions, ideas or improvements please contact me. My webpage is available on My email is: [mariovann@msn.com](mailto:mariovann@msn.com) Thank you! Soccer Ball Game - Soccer Ball Game is a classic game from back in the day that allows you to throw and kick the soccer ball across the screen. The soccer ball bounces off the walls and if it enters the goal area you score a point. Make the ball get as high as you can and you can knock down the bricks that are in your way. Click on the boxes in the corners of the screen to jump the ball around and knock down the bricks in your way. Try to make the ball get into the central area of the screen and you'll score. More ISL games are due to be streamed this month, with the first being held in London. The matches will be streamed live on YouTube on a weekly basis. This is the first time that the league is taking its matches online, as it looks to capitalise on the increased exposure of players for a longer period of time. Ahead of the move, the ISL was looking to develop on its global platform with a plan to expand the league to 30 cities worldwide. "We've been very clear in our communications since the start of the season that we will follow every championship - we don't play by popularity. We respect the tradition and history of every league and we will follow the ISL wherever it goes," a league spokesperson told Goal.com. The spokesperson added that the matches will be able to be watched by anyone. "Fans around the world will have access to a large amount of competition

## **What's new in Surf World Series:**

**The expansion offers a full asynchronous engine and new sector maps filled with a never-ending stream of simultaneous train movements. If you're not into train sims, then you should probably steer clear of SimTrain Simulator - while it's free, the up-front game costs ~\$70 - but if you've grown tired of the core items or are curious about how a full train simulator works, BR Sectors Class 56 Loco Add-On is a must have for any TS2018 fan. This expansion pack, which runs \$18.99 (no, not USD), is the key to training that very expensive locomotive and upgrading it with all of the latest materials and features of the Steam Workshop. At this point you might be concerned that this add-on is horrendously buggy or broken. The truth is, it's a well-built add-on and the core game is so stable that there are just so many things that can go wrong with it. It's functional and plays very well, while being a complex one with complex gameplay that requires the patience of a saint. A culmination of best practices within the Steam Workshop, BR Sectors Class 56 Loco Add-On is an excellent training tool for any TS2018 user, especially if you're thinking of taking up railroading. STAGES**

**The add-on is split into seven stages. The first two, titled "Route 33 - Hangerpole to Fraycolli" and "Route 33 - Rame to Amburry", are tracks mainly within northern Switzerland, with more than one section being interspersed with towns and the occasional locomotive. If your start of connectivity struggles, or if you've not yet had the privilege of working with a metal locomotive, these stages will be a great place to start understanding the finer points of this engine's operation. The next two stages, named "Route 44 to Aramby" and "Route 44 to Lingfield", are a two closely following tracks closely mirrored around the UK - the former along the coast and the latter closer to London. The latter includes the ultimate in challenge for locomotive enthusiasts - the Ounce Loop - a bit of continuous track that was built as a spur of sorts so that when Train Simulator and TS2018 were first released it was possible to drive around a full circle after raising the loop's apex. I remember this**
