An older version of AutoCAD is available for free use under the GNU General Public License (GPL). History AutoCAD is widely used in the architecture, engineering, and construction industries. It is one of the top-selling

---

commercial software packages in the world with over 8.5 million users in over 100 countries. AutoCAD was the first CAD application to sell for personal computer use. It was quickly followed by similar programs, including Bentley Systems' ArchiCAD and 1992's Cad-a-Way, and has been the most popular software tool for creating architectural and engineering

---

drawings ever since. AutoCAD was originally developed in 1982 by a team of engineers at a company called Southern Micro Systems, in Huntsville, Alabama, as a desktop program that would run directly on personal computers of that time. Several small companies released versions of AutoCAD for the Apple II, Commodore 64, and other microcomputer

---

platforms. The name Autodesk originated in 1979 when Richard Burton, an employee of the AutoCAD development team, was told that his new software was more capable than the previous year's offerings. In 1983, Autodesk was founded. In 1984, its first product, AutoCAD, was introduced. Autodesk designed AutoCAD to be simple, easy to learn,

---

and suited to small or mid-sized businesses. The company's first commercial release was the AutoCAD LT, a more limited desktop version of the full AutoCAD system. In 1986, Autodesk also introduced a specialized version of AutoCAD for architectural design, AutoCAD Architecture (then titled AutoCAD DWG Architect) for architectural and engineering

---

design, and AutoCAD LT Architectural. This was the first version to be fully multi-user and multi-platform. AutoCAD's introduction was closely tied to the availability of affordable personal computers. In 1983, Apple Computer and Microsoft released their own low-cost, multi-user CAD programs for the Apple II and DOS platforms. Two years later, in

---

1985, Microsoft released its own AutoCAD for Windows and CAD/CAM for the Macintosh. In 1990, Autodesk introduced AutoCAD/Map 3D, a program that combined AutoCAD with MapInfo, a technical data package (TDP) for mapping software. MapInfo then was sold as part of a bundled package with AutoCAD/Map 3D. In late 1992,

Languages Language support for programming and drawing is included with the program, with syntax highlighting for a number of programming languages. These include:
