To date, although over 200 endovascular interventions have been performed at The University of Texas M.D. Anderson Cancer Center (UTMDACC) since 1990, no comprehensive review of our eight-year experience with endovascular techniques has been reported. We have developed a multidisciplinary vascular surgical unit at UTMDACC where both conventional and endovascular vascular surgeons perform procedures for a wide range of indications. The purpose of this study is to review our overall experience with endovascular therapy, to summarize the type of interventions performed, and to establish benchmarks for clinical performance. From January 1, 1990, to December 31, 1997, a total of 558 interventions were performed by 35 surgeons (vascular and endovascular) at UTMDACC. Charts of each patient were reviewed retrospectively. Indications included trauma (n = 282), primary disease (n = 192), and secondary disease (n = 74). Unsuccessful procedures were compiled into three groups: failed to cross lesions in the
