Q: How do I get the value from a success function in AJAX? I am a total newbie with Ajax, but I have come to realize, that I am not going to learn it with the straight path, and that is where I am stuck. I have the following code: function MyAjaxFunction() { $.ajax({ type: 'POST', url: '', dataType: 'json', data: { 'id': 3 }, success: function(response) { alert(response.value); //example: function(data){ // alert("This is function"); //} } }); alert("Ajax function has been run"); } The idea behind the code is that the function will run an ajax script that will get the value passed to it in the body of the script and if it is a success, it will alert it. This means that a button that calls this function is running the script, which is a success. What I can't seem to figure out, is how to get the information that was retrieved back from the script to send it to the function that runs the script
