Added lot more translations! Updated Austrian and Italian (incl. new pdf reader) drivers You can now save/load your language with the driver! Trovafloxacin. Trovafloxacin, a new fluoroquinolone antimicrobial agent, is being developed by Trius Therapeutics Inc. (formerly Trius Pharmaceuticals Inc.). In preclinical in vitro and in vivo studies, trovafloxacin has demonstrated potent activity against a wide spectrum of gram-negative and gram-positive microorganisms and organisms resistant to other quinolone or beta-lactam antimicrobial agents. Trovafloxacin is primarily excreted in the urine and has a shorter elimination half-life than ciprofloxacin and other quinolones. Trovafloxacin was well tolerated in an open-label, placebo-controlled trial of healthy volunteers. Patients with community-acquired pneumonia and acute exacerbations of chronic bronchitis had similar clinical cure rates with trovafloxacin (47%) and ciprofloxacin (48%). Efficacy and safety data from clinical trials of trovafloxacin have yet to be published. In April 1995, Trius Therapeutics Inc. filed an NDA with the FDA to market trovafloxacin for the treatment of acute bacterial exacerbation of chronic bronchitis, community-acquired pneumonia, skin and skin structure infections, acute bacterial sinusitis, nosocomial pneumonia, and uncomplicated urinary tract infections. The present invention relates to an exposure apparatus and a method of manufacturing a device using the apparatus. In a photolithography process for manufacturing various electronic devices (microscopic integrated circuit, liquid-crystal display device, plasma display device, thin film magnetic head, optical device, nano-imprint, biosensor, and the like), a projection exposure apparatus has been employed, which projects a circuit
