AutoCAD is used for two-dimensional drafting, graphic design, and documentation, including landscape and architectural design. It supports both 2D and 3D design. History AutoCAD uses the coordinate system of North America and many other countries. The first version of AutoCAD was published in December 1982, to take advantage of the installed base of equipment produced for the HP/8400 and NCR systems. The operating system was DOS 4.0. The first version of AutoCAD was used by Bob Branson at Digital Equipment Corporation (DEC) to design and document the Unix platform of DEC VAX machines at its Waltham, Massachusetts, factory. From 1982 to 1992, AutoCAD was the only CAD program that ran on the Unix platform. For over a decade, AutoCAD was the only commercial CAD program that ran on Unix. The original program code ran on HP/PS-20 computers and on NCR Corp. mini- and mainframes. The code was written in 7-inch floppy disks and used an interpreter, rather than compilers, to process instructions. It was the first commercial CAD program that could be used at the desktop. AutoCAD was designed to run on a computer with a Microsoft MS-DOS operating system. To help build the market, Autodesk provided free PostScript (PS) technology and a public domain implementation of the PostScript interpreter on the public domain operating system Unix. The Unix version of AutoCAD was renamed to PostCAD. At first, PostCAD was a commercial product, but the price was cut by 50% as a result of market conditions. The GUI was created using the UI library. In 1992, a new version, AutoCAD 1.0, was released. AutoCAD was rewritten from the ground up as a native application. The old DOS version (1.0) was renamed to AutoCAD 80. The current version is AutoCAD LT, which has more features, but it is slower than the previous version. The first 3D version of AutoCAD (AutoCAD 3D) was released in September 1993. AutoCAD 3D was a major step forward for 3D CAD. The first release of AutoCAD 3D, for the HP/7000 series was released in July 1993. AutoCAD 3D introduced the QuickCAD framework, which also became available

Language Development - AutoCAD VBA provides the ability to write code in Visual Basic for Applications. This allows for the development of external applications for AutoCAD. This type of development can be either front-end or back-end. Front-end development is usually in a programming language that is a command line program, and the VBA will execute the program to draw. Back-end development uses Visual Studio to build and execute the program in Visual Basic. The AutoCAD Electrical suite is based on the ObjectARX library, which is a C++ class library used in AutoCAD for programmatic development. AutoCAD contains a programming language called "AutoLISP" which is an object-oriented programming language. This allows programmers to create their own functions for AutoCAD to automatically perform certain tasks. For example, the "Get Radius From Length" function is an example of AutoLISP. VBA (Visual Basic for Applications) is a programming language used in AutoCAD to program the user interface. This programming language is most often used for automation and customisation, for example, VBA was used for AutoCAD 2000 and AutoCAD LT to develop features such as customising line styles, backgrounds and frames. VBA can also be used for the construction of dynamic user interfaces. For example, VBA is used in the construction of the ribbon. Visual LISP is a programming language used in AutoCAD for creating macros. These macros can automate certain tasks. For example, the "Place Columns" macro is an example of a Visual LISP macro. Microsoft Visual C++ is a programming environment used in AutoCAD for development. ObjectARX is used for the programming. AutoCAD scripting with ObjectARX consists of several techniques, such as DirectScript, LISPscript, and Macro and VBscript. DirectScript is a language used to define a script for a custom drawing process. It is written in ObjectARX. It is similar to Visual LISP. LISPscript is a programming language used in AutoCAD for automation and customisation. It is a procedural, interpreted language, but it also has a function evaluator. Macro is a programming language used in AutoCAD for programming. It is a procedural language similar to Visual Basic. VBscript is a programming language used in AutoCAD for the scripting of user interface af5dca3d97
