Photoshop is known for its powerful image-editing features, but occasionally its features can be difficult to master and use. Powerful yet easy to use, Lightroom by Adobe incorporates media-editing capabilities that put it directly ahead of the competition. In addition, Lightroom for android even lets you stream video directly to your phone from SD cards on the Adobe Creative Cloud, though unlike the desktop application, the mobile apps are not as robust. Lightroom also has social sharing on social media as well as direct sharing to popular online services like evernote , Google Drive, and Dropbox. There is probably no other software that does so many things so well. Considering CS2, the interface is a bit outdated, but who cares? It is still a stupendously sophisticated image editing package. Only recently have Adobe's perennial competitors really caught up to Photoshop at the price. One of the aspects I quite like about Lightroom is the simplicity of use. That's not to say that the price for Lightroom is not high, but still, the layout, the workflow and the power of its features make it far more flexible than Lightroom. On the other hand, Adobe is offering Photoshop CC for two new platforms: Android and Apple iOS. It is expected that these will become available to more designers, and it makes sense that they will not neglect such an important segment of any market. That being said, let's examine their advantages compared to Lightroom. After all, it's the most powerful application.
