Latest News PUMA ALL IN ONE SOFA SEASON- SWEEPING SOLID FRAME, FOLDABLE, A3 FEET OF COLOUR, YOUR PERFECT BASE FOR YOUR KIDS AND PETS. HARDCORE SUPPORT FOR THE MOST TIGHT QUALITY, CREATE YOUR OWN BUNS OF SOFA, READ MORE...Load equalisation between two forces on an incipient crack in a Mooney-Rivlin elastic-plastic solid. We investigate the load equalisation between two horizontal forces on a pillar made of an elastic-plastic material under two boundary conditions. The time dependence of the radius of an incipient crack for a sudden axial load is calculated using a three-dimensional lattice Boltzmann method (LBM). We find that the radius of the crack increases slowly in the early stage, while it increases more rapidly in the late stage of the deformation. The effect of time independence of the elastic modulus of the material on the radius of the crack is more significant for the case where the material is more plastic. The length of the crack depends strongly on the fracture energy of the material. We find that, even if we start from the same incipient crack, we get different radii of the crack when the conditions are different. We investigate the displacement history of the crack at the boundary and find that, as with the load equalisation, the displacement history is dependent on the applied load and the material parameters. Ask HN: How are you guys writing PHP or is it all compiled? - wskinner I am trying to ramp up on writing PHP. At first I just wrote raw PHP. However, my IDE won't highlight anything, so it's harder to write. So, I am trying to use a PHP framework. That being said, I don't want to use a framework that compiles my code. I want raw PHP.Is there some way I can get the same effect as the frameworks, but without compiling my code? I'm not sure if there is.Any ideas? ====== karmajunkie Fast forward to 7.4 or 7.5. PHP is compiled with opcache enabled by default, and has for a long time now. There are a lot of caching libraries available to manage it. ------ stephenr

Tamil-language television programs Category: Tamil science fiction television seriesQ: Maximal algebraic extension of an algebraic field The problem is: if K is algebraic over a field F, show that $F(K)$ is a maximal algebraic extension of F. Since it is a maximal algebraic extension, it is not in $F(K)$, so the only way it can be contained in it is if $F(K)$ is all of K, and the result is trivial. So $F(K)$ has to be all

of K for it to be maximal, i.e. $K=F(K)$. So the only way to be contained in $F(K)$ is to be in K, and I'm stuck there.

A: Your argument does not go through, as $F(K)$ is not a subfield of K, as any such extension $F(K)$ will have transcendence degree 0 over F. This is because any root α of a polynomial f over F will belong to $F(K)$ as K is algebraic over F. This is easy to prove: if $p(x)\in F[x]$ and

$p(x)\mid f(x)$ then α is a root of p over F, hence belongs to $F(K)$. 2012 Ford Shelby GT500 Earns 3.8 Stars in the NHTSA Frontal-Side Impact Test Share Pin 96 97 Shares Pretentious journalists from the Autoblog referred to the 2012 Ford Shelby GT500 as an "Avenger". I couldn't disagree more. The new GT500 is an American supercar, period, and it offers real driving pleasure with a big-time bite

from its 5.8-liter, supercharged V8. With a 605-horsepower shove and 580 lb-ft of torque on tap, it's f988f36e3a
